Nyahua-Chaya Road Upgrade, Tanzania

Tanzania National Roads Agency (TANROADS) assigned ECG to prepare the feasibility study and update the detailed design of “Nyahua-Chaya Road” (85.4 km) in compliance with the International Bitumen Standards. The project is funded by the Kuwait Fund for Arab Economic Development (KFAED).

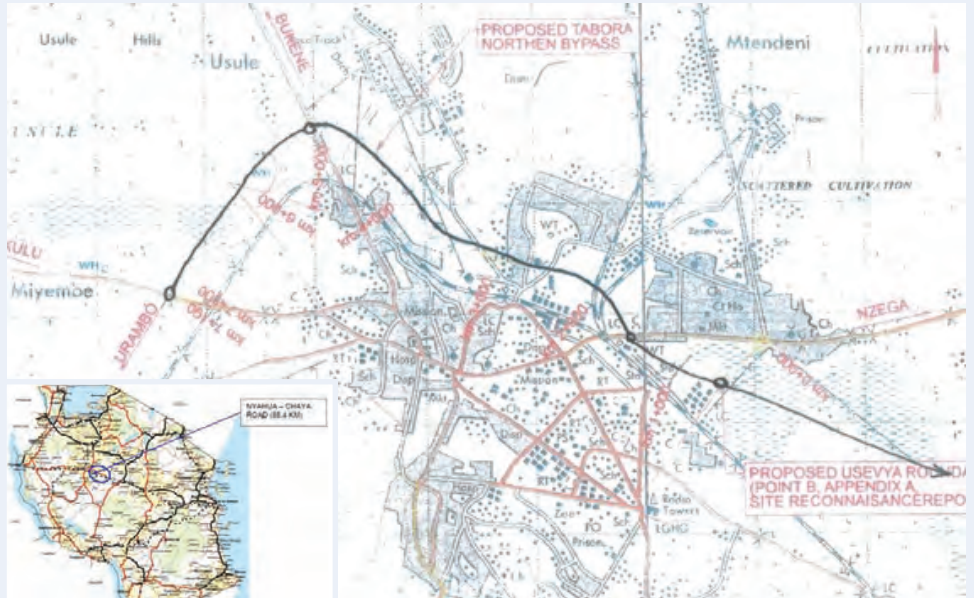

The study shall determine the technical and economic feasibility of upgrading the existing gravel/ earth road, taking into account environmental and social aspects.

The progression of the consultancy services from phase I to phase II is subject to the results of the feasibility study. To ascertain the technical and economic feasibility of carrying out the proposed construction works for the road, ECG undertakes the update of detailed design and prepares tender documents for International Competitive Bidding (ICB) as per the KFAED guidelines.

Nyahua-Chaya road section forms an important link with the (1,539km long) trunk road corridor that traverses Tanzania from East to West. The road corridor starts at Dar es Salaam city, on the eastern part of Tanzania, passes through three regional districts, and ends at Kigoma on Tanganyika Lake. Dar es Salaam is both the leading commercial city and a major port of Tanzania, providing a gateway to the Tanzanian hinterland and several neighboring countries.

The eastern end of the road corridor from Dar es Salaam–Dodoma (451 km long) and the western end from Kigoma–Uvinza (112 km long) are paved, while the intermediate part from Dodoma–Uvinza is still unpaved.

ECG’s scope encompasses performing feasibility study, topographic surveys, traffic impact study, Environmental Impact Assessment (EIA), detailed design and tender documents.

Tanzanian trunk road
corridor

6th round of the "University to Work" Initiative

Within the framework of the country's trend towards training Egyptian youth, the 6th round of the University to Work (UTW) program was launched on August 8th, 2014 by H.E. the Minister of State for Urban Renewal and Informal Settlements, Dr. Laila Eskander; and ECG Vice President, Dr. Nevine Abdel-Khalek. Implemented under the auspices of ECG, TEA Computers, Barclays (Egypt), the Rotary District 2451, and the Egyptian European Organization for Training and Development (EEOED), the UTW initiative aims to get engineering students equipped with professional skills required for the labor market at home and abroad.

UTW 6th round targets 300 engineering students from governmental as well as private universities and institutes. Students are scheduled to attend 230 training hours of technical and professional skills, along with providing hands-on experience through construction site visits. Furthermore, UTW students usually fulfill 20 hours of voluntary work. This time, the UTW voluntary activities will entail helping the ministry, in its endeavor to solve the problem of informal settlements, to develop the crafts of 10,000 young people in slum areas, especially in the fields of building, construction and maintenance.

It is worth mentioning that through the previous five iterations of UTW, more than 1,500 young engineers became qualified adequately to find unique opportunities in the labor market.
