Electrical
HVAC
Landscape
Mechanical
Roads
Structural

A strip of land planned to be developed by Cairo Airport Company (CAC) for commercial development and an airside support base for Egypt Air. The site is divided into a landside area accessible by general public and an area bordering on airside for the various components of the Egypt Air Compound. Crucial to the development of the

site is proper locations of landside to airside gates and a secured fencing of the landside to airside boundaries. The overall site area is 59 hectares (590,000 m²), the Commercial Development takes up an area of 44 hectares (440,000 m²) and Egypt Air Compound occupies the remaining 15 hectares (150,000 m²).
