Structural

The project comprised the demolition and reconstruction of seven mosques (three floors each) at different locations in Qatar. Each mosque features its own special design inspired by the architectural style, society, and climate of the Gulf Area, with special attention given to the needs of the disabled. Over a total plot area of 6,267 m², each mosque comprises the following levels:

- Ground floor: men's prayer hall, women's prayer hall and toilets, Da`wah room (with a kitchen and toilet),

cleaning room, temporary room for the muezzin (with a kitchen and toilet), service courtyard, ablution facilities, and toilets

- First floor: men's prayer hall
- Second floor: imam's residence (three bedrooms, living room, kitchen, and two toilets); muezzin's residence (two bedrooms, living room, kitchen, and two toilets); two separate entrances for the two residences; and elevator.
