Structural

The project involves upgrading an existing hospital in Port Fouad City, Port Said Governorate, with a total built-up area of 8,000 m<sup>2</sup> above ground. The goal is to modernize the facility and incorporate it into the comprehensive health insurance system.

The hospital comprises a ground floor and five upper floors. The renovation will transform it into a fully

equipped medical center, offering a wide range of services with a **bed capacity of 36**. These services will include emergency care, radiology, a cardiac care unit, chemotherapy, surgical suites, and essential hospital services such as the laboratory, pharmacy, morgue, and more.
